

SMT VacMaster™ Central System

VacMaster™ Call for a Quote

As shown in combination with a high pressure SMT central system

300-7310: Central Wet Vac Main Unit (low pressure)
 300-7340: Central Wet Vac Main Unit (high pressure)

NOTE: The SMT VacMaster is NOT a chemical delivery system.

NOTE: If hot water is required, a hot water recirculator will be required and will need to be sourced by others. Water is not to exceed 120°.

No Drain? No Problem! The SMT VacMaster® utilizes the pressure cleaning of a SMT Central System while vacuuming 98% of the water it puts down. The VacMaster is perfect for retrofitted restaurants without floor drains.

Like a SMT Central System, the VacMaster is centrally placed and ran out to remote locations. In less time than it takes to fill a mop bucket you will be washing, rinsing, and sanitizing your floors; while at the same time vacuuming excess water and gray matter from floors.

TECHNICAL SPECIFICATIONS

- Works with both SMT, hi-Pressure and low Pressure Systems
- Industrial Central Hi-Flow fluid extractor
- Automatic dust filtration by 2 low flow cold water jets
- Automatic self-flushing drain
- Two, Industrial 120v motors
- 180 H²O (Inches)
- 120 ft 3/min Air Flow
- 706 Air Watts
- 6 gallon capacity with automatic flushing for continuous use
- Weight (no water): 80 Lbs / 36 kg

FEATURES

- Upper and lower tank are separated, allowing for easy clean out of solid debris
- No bags or buckets to fill, dump, or change - it's automatic!
- Porthole, for easy viewing and easy access to internal parts
- Heavy duty tank housing
